

Civocracy

We are fixing the relationship between governments and their citizens.

CivicTech | GovTech | SmartCity

At Civocracy, we use technology as a tool for empowerment.

Our civic-participation platform and advisory services ensure government are equipped with the means to constructively collaborate with their citizens, and guarantees that people's voices are heard. This enables them to co-create policy and projects that are implemented in communities to make society better.

Platform: features include

City-led discussions (top down)

Qualitative debate, started by cities, centred on a specific theme.

Call for projects (bottom up)

High-level ideas sourcing from community experts and citizens.

AI-powered content analysis

Sentiment and keyword tracking for detailed reporting.

Accessible design

Curated UX ensuring a low barrier for participation with high-quality outcomes.

Advisory services: knowledge includes

Strategy and formation days

Workshops on best practices and platform functionality.

Educational programme

Ten-month programme featuring workshops and webinars.

Specialist reporting

Personalised insights and recommendations.

Community membership

Access to our global community of cities.

Like good government, good technology fits into your day-to-day life so seamlessly that you don't realise it's there.

Our platform harnesses machine learning and natural language processing, as well as big data analytics, to undertake sentiment analysis, automated processing and keyword detection in order to provide detailed insights and personalised recommendations to government decision makers.

The problems we solve.

Legal

Legislation requiring citizen consultation is increasingly prevalent, but 85% of public sector workers have no training on the subject.

Digital

Government must become digital to deadline, but 50% of civil servants don't feel as if they know how to do this.

Trust

As we all know, trust in government is low, and citizens are feeling increasingly unheard and unrepresented.

“Administrations can’t govern like they used to; there’s incredible strength to be gained by involving citizens. Thank you Civocracy for helping us progress in digital participatory democracy!”

Metropole Nice Cote d'Azur

We're active in 4 countries across Europe, and work with government of varying sizes, from small towns to national level.

We also work with think tanks, corporates and NGOs to host online conferences and undertake internal decision making.

When compared to traditional methods, we help government:

About.

Civocracy was founded in 2015 when Benjamin Snow, Chloé Pahud and Nicolas Reynolds saw the potential of technology and community for transforming the political sphere.

The team is based in Berlin, and are working on becoming the global platform for constructive debate, collaboration and decision making.
